

MANUAL MINING POS

How do I brake a block? (Scrypt POS)

Install Wallet and make sure you are connected to the network (image).

You are connected if you see the icon

Steps:

1. Close your Wallet (Exit)
2. For Windows Explorer, go to the folder "% APPDATA% \ scolcoin \".
example: "C: \ Users \ mipc \ AppData \ Roaming \ Scolcoin" on win10
3. Copy and Paste the scolcoin.conf configuration file attached to the email.

Activate Stake(Bet) in POS

Close your Wallet (Exit)

Make sure that in the file scolcoin.info the bet mode is activated "stake" in this way:

staking = 1

Store and close scolcoin.conf file

This ensures that by having more than 1200 mature SCol you will be able to mine.

Open your Wallet and you will find the following icon:

It is set to Bet mode (stake)

Requirement:

- 1 - Must have at least 1200 SCOL
- 2 - You have to wait 1400 blocks from your initial deposit to be able to bet on SCOL.
- 3 - You must have a public address.

Image Gain:

Deactivate Stake on POS to use the balance

Modify the scolcoin.conf file located at: "C: \ Users \ mipc \ AppData \ Roaming \ Scolcoin"

In the line where we have staking put 0 like this:

staking = 0

Store and close file.

This way you expect 1400 blocks and you can use your funds.

To confirm, we open the Wallet and note that the stake icon is not:

With this step it is verified that stake (POS) mode is disabled.

NOTE:

In Pos the one that has more saved will have more interests it does not matter the equipment it can be new or old but remember to make Backup and have updated antivirus.
